

## **Thermoid®** NURSERY/GRAFTING BUDDING STRIPS

Tree grafting is now a lot easier with Thermoid budding strips. Reduce your normal grafting time by half with these easy to use rubber, nursery grafting strips. Just graft, wrap, tie and you're done.

**Thermoid** Budding Strips provide you with a simple and easy grafting application. Just wrap the graft, twist the strip ends and the graft is finished. Our grafting strips hold the bud union gently and firmly in place while preventing air moisture seepage.

Our grafting strips are 100% natural rubber so using them creates no environmental concerns. An even bigger plus to their use is removal is not required. The strips disintegrate after the graft is secure. The strips can be sized to your grafting needs and they are available in various widths, thicknesses and lengths ranging from **4 to 8 inches**.
